HYPOXI® - Head office on Lake Attersee, Austria

Straß im Attergau, February 2024

The unique HYPOXI-Method® for a beautiful body was developed in Salzburg at the end of the 90s and is now a household name in many countries around the world.

With its innovative combination of under- and over-pressure treatment and effective training, the HYPOXI-Method enables targeted and sustainable body shaping in a completely natural way. Undesired fat deposits are reduced from the stomach, hips, buttocks and thighs by using the natural principles of lipid metabolism.

The HYPOXI-Method® has a unique effect on typical female, but also male problem areas. At the same time, the HYPOXI-Training® continually strengthens the connective tissue and firms the skin so that the unpleasant appearance of cellulite is clearly improved. First results are already visible after a few treatments.

Personal support from trained HYPOXI®-Coaches is a top priority at HYPOXI®. They define your individual HYPOXI®-Program and continuously monitor the execution, progress, and the training success.

HYPOXI®, the world market leader in targeted, natural body shaping, has been producing its innovative training equipment in Wildenhag, in the municipality of Strass im Attergau, for more than 15 years! Three years ago, HYPOXI® also relocated its company headquarters with sales office and showroom to the production site on Lake Attersee!

HYPOXI® has now decided to open its doors and offer HYPOXI-Training® to end consumers in a newly adapted HYPOXI®-Studio. "We are often asked why we don't make the HYPOXI-Method® accessible to the public here at Lake Attersee", says HYPOXI® Managing Director Uwe Hintringer.

"For the management of the HYPOXI®-Studio, we are currently looking intensively for committed employees who are sociable and prefer personal responsibility and flexible working hours."

The HYPOXI® devices at a glance:

HYPOXI-Trainer® S120

The S120 combines the three components of HYPOXI-Method® effectively: The computer-controlled alternation of high and low pressure takes place in a chamber that reaches up to the hips. The gentle exercise takes place sitting on the integrated bicycle ergometer. This puts the problem areas – hip, underbelly, buttocks and legs - under pressure, facilitates the activity of the veins and eliminates fat in a targeted manner.

HYPOXI-Trainer® L250

The L250 permits the alternating application of low-pressure for the underbelly, hip, behind and legs. The comfortable reclined position relieves the body of most of its weight during training and promotes the elimination of liquids and toxins. The results are beautiful, slender legs and a visible reduction of cellulite.

HYPOXI-Vacunaut®

The Vacunaut is used to reduce the girth of the stomach and hips. Training is performed in the HYPOXI®-PressureSuit with an integrated network of 122 high and low pressure chambers.

During moderate exercise - which can take place on a treadmill, exercise bicycle or other popular cardiovascular exercise equipment - the application of high and low pressure targets the abdomen and hips.

HYPOXI® HD-Comfort

In order to remain firm and strong the skin needs special treatments. 400 active vacuum chambers integrated in the problem areas in HYPOXI® HD-PressureSuit ensure that the skin gets the exercise it needs. A comfortable lounge chair with integrated high and low-pressure technology ensures pleasant relaxation while the elastic connective fibres of the skin work diligently to achieve smooth, firm skin.
